Problem

The knights in a certain kingdom come in two colors. $\frac{2}{7}$ of them are red, and the rest are blue. Furthermore, $\frac{1}{6}$ of the knights are magical, and the fraction of red knights who are magical is 2 times the fraction of blue knights who are magical. What fraction of red knights are magical?

- (A) $\frac{2}{9}$ (B) $\frac{3}{13}$ (C) $\frac{7}{27}$ (D) $\frac{2}{7}$ (E) $\frac{1}{3}$

Solution 1

Let k be the number of knights: then the number of red knights is $\frac{2}{7}k$ and the number of blue knights is $\frac{5}{7}k$.

Let b be the fraction of blue knights that are magical - then $2b$ is the fraction of red knights that are magical. Thus we can write the equation $b \cdot \frac{5}{7}k + 2b \cdot \frac{2}{7}k = \frac{k}{6} \implies \frac{5}{7}b + \frac{4}{7}b = \frac{1}{6} \implies \frac{9}{7}b = \frac{1}{6} \implies b = \frac{7}{54}$

We want to find the fraction of red knights that are magical, which is $2b = \frac{7}{27} = \boxed{C}$

~KingRavi

Solution 2

We denote by p the fraction of red knights who are magical.

Hence,

$$\frac{1}{6} = \frac{2}{7}p + \left(1 - \frac{2}{7}\right) \frac{p}{2}.$$

By solving this equation, we get $p = \frac{7}{27}$.

Therefore, the answer is $\boxed{(C) \frac{7}{27}}$.
